

MOBILE FIRST

Mobile platform to communicate using voice calls over internet. GeoChat helps people who live in the same vicinity discover each other and communicate in case of needs. It also helps Drivers to communicate with another Driver just by using simple voice commands.

OS: Android, iOS, Flutter

Domain: Communication

GeoChat uses VOIP as the mode of communication between multiple users. Primary use of the GeoChat application is to call the users in the same area as yours. There can be multiple scenarios in which GeoChat becomes useful such as, it enables seamless communication between moving vehicles. GeoChat helps people who live in the same Society communicate with each just by discovering them through Nearby feature. GeoChat uses Geofencing to discover people nearby and also it uses their real-time location. Although it is a communication application, Privacy of each user is also maintained using unique User Names.
